

Daniel Bailey

Full Stack Software Engineer | AI-Assisted Developer | Python & TypeScript

Chino Hills, CA 91709 • krispedgez@gmail.com • github.com/Pr1nc3B33/small-biz-app

SUMMARY

Performance-driven Full Stack Software Engineer with a 15-year background managing mission-critical digital media pipelines for high-profile film and television productions. Expert in building web applications using Python, TypeScript, and React, with a specialized focus on AI-assisted development (Claude, Cursor) to accelerate output and optimize code quality. Proven track record of delivering structured, zero-fault data management under hard deadlines, now applying a meticulous, ownership-driven approach to scalable software solutions.

TECHNICAL SKILLS

- **Backend:** Python, Flask, Node.js, REST APIs, PostgreSQL, SQL, Firebase Firestore
- **Frontend:** JavaScript (ES6+), TypeScript, React, HTML5, CSS3, Jinja (familiar), Bootstrap
- **Database:** PostgreSQL, MySQL (familiar), Firebase Firestore, SQL query writing and optimization
- **AI Tools:** Claude, Claude Code, Cursor, GitHub Copilot, ChatGPT — used daily for debugging, code review, and accelerating output
- **DevOps & Practices:** Git, GitHub Actions CI/CD, automated testing, OOP, SOLID principles, third-party API integrations

EXPERIENCE

Software Engineer Apprentice | [Coding Temple](#) | [Remote](#)

2026

- Engineered a full-stack e-commerce application in React and TypeScript with Firebase/Firestore backend, real-time data sync, and Firebase Authentication for user session management.
- Configured a GitHub Actions CI/CD pipeline automating lint, test, build, and deploy on every commit — production deployment without manual steps.
- Engineered REST API integrations for product data, cart management, and order processing with clean, documented endpoints.

On-Set Data Manager | Film & Television | [Freelance](#)

2005 – 2022

- Directed complete digital media pipelines across 15+ years of feature films and television series, ensuring 100% data integrity and zero asset loss in high-stakes, time-sensitive environments.
- Operated under structured, hour-by-hour accountability on live productions where every task was tracked, every handoff was documented, and every deadline was hard — the same discipline this role requires remotely.
- Executed rigorous checksum verification on all media transfers, maintaining zero data corruption across thousands of hours of irreplaceable footage.
- Coordinated across directors, producers, and post-production supervisors in real time — clear, concise, cross-functional communication under pressure.

Live Sound Engineer | Events | [Freelance](#)

2000

- Mixed live audio for events under real-time constraints — no undo, no retakes, immediate troubleshooting when anything went wrong.

PROJECTS

[SmallBiz Desktop App](#) — [Personal Project \(Open Source\)](#)

2025 – Present

- Architected a cross-platform desktop application in Electron.js and JavaScript consolidating inventory tracking, employee scheduling, and manager task assignment into a single offline-first tool.
- Chose local file-system storage over a server database — a deliberate tradeoff for small business users who can't absorb cloud costs, network latency, or infrastructure complexity.
- Integrated third-party data sources and REST API patterns throughout the application; built with clean separation of concerns for maintainability.

- Leveraged Claude and Cursor throughout development for code review, debugging, and architectural decisions — with full ownership and testing of all generated output.

EDUCATION

Full Stack Developer Bootcamp — Coding Temple	2026
Python, JavaScript, TypeScript, React, Node.js, PostgreSQL, REST APIs, CI/CD, Git, OOP, SOLID principles	
Bachelor of Fine Arts, Visual Arts — Brooks Institute, Santa Barbara	2009
Associate of Arts, Audio Engineering & Acoustics — Citrus College	2001
